

CALIFORNIA AND VERMONT LEAD LAWS

New laws concerned with lead levels in plumbing products and other items are now in place in California and Vermont. The laws require specific lead levels beginning January 1st 2010. Cash Acme will comply with these requirements.

Additionally, Please note the following extract from the *Vermont Attorney General's Guidance for Businesses*.

Plumbing fixtures and solder for plumbing. As of January 1, 2010, these products will have a separate limit on lead patterned on California law: a “weighted average” of 0.25 percent for fixtures and 0.20 percent for solder or flux for plumbing. “Plumbing fixtures” means pipes, fittings and fixtures used to convey or dispense water for human consumption.

Requirement of disclosures and handouts. In addition to complying with the limits on lead described above, sellers of the following products—if they do or may contain lead in excess of the stated limits—are required to post disclosures and hand out information on the risks of lead exposure, as prescribed by the Attorney General

Additional information is available on this [handout](#).

Please be aware that the material composition of the product(s) supplied by Cash Acme have not increased in lead content. The language added to the packing slip is simply as required by Vermont law. The Vermont bill may be viewed in its entirety by following the following link:
