

BF Series Dual Check Backflow Preventers

Cash Acme's BF Series Dual Check Backflow Preventers are designed to prevent polluted water from entering the potable water supply system by preventing the reverse flow of water into supply lines.

The BF Series is designed to protect the primary water system (city water supply) by providing containment at the point of distribution. These valves function in either the horizontal or vertical position under continuous or intermittent pressure conditions.

- Prevents polluted water from entering the potable water supply system: *Prevents the reverse flow of water into supply lines.*
- Straight through design: *Minimizes pressure drop.*
- May be installed horizontally or vertically.
- Listed by ASSE 1024 and CSA: *Inspector friendly, peace of mind!*

TYPICAL INSTALLATION

The Cash Acme BF-1 may be installed anywhere in the service line. The BF-5 is intended to be installed immediately downstream of the water meter.
