

# Cash-Flo® Pressure Vacuum **Breaker PVB**

## **DESCRIPTION**

The pressure vacuum breaker is designed to be installed in high hazard service to provide backflow protection against back-siphonage of contaminated fluids. It incorporates an independently acting check valve with a spring loaded float disc. Under normal operation, the float disc remains closed. When the internal pressure of the device falls to 1 PSI or less, the float disc opens to atmosphere. This feature prevents back-siphonage or the creation of a vacuum.

#### **FEATURES AND BENEFITS**

Replaceable seat:

Allows for easy repair, reduces costs and saves time.

Fewer internal parts:

Allows for easy maintenance, reduces costs and saves time.

Corrosion resistant parts:

Provides for longer life with less service.

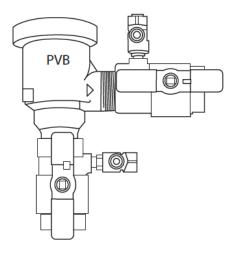

Valve bonnet and seat rings composed of high quality Noryl™: Lasts longer and holds up to extreme conditions.

Product has all major national approvals: Inspector friendly peace of mind!

Pressure Vacuum Breaker shall protect against backflow by either back-siphonage or the creation of a vacuum. The device shall be constructed of bronze. It incorporates an independent check valve with a spring loaded float disc. Designed for installation on potable water lines to prevent against contaminated water back-siphonage into the potable water supply. Assembly shall provide protection against back-siphonage where a potential health hazard exists.
